AUDAC Touch™ 2 - Release notes
Version 2.4.1

Improvements:

- Improved layout device settings pages on iOS.
- We have improved the user experience of the automatic device discovery function when launching the application.

Bugfixes:

- If you are logged in on multiple devices and you add a device to the list, the device list doesn't get updated on IOS.
- The link to the setting pages was not visible due to a caching problem.

We would like to thank everyone for all the feedback. Together we are building the future.

Supported platforms include: Linux, iOS, macOS, Android and Windows
