

AUDAC Touch™ 2 – Release notes

Version 2.8.0

New features:

- Your screen won't scroll any more if all panels are visible.
- Dashboards with fewer panels are now allowed.
- The app now supports the new BMP42.
- The app now supports the new DMP42.
- We have added 'Touchlink' as search term

Improvements:

- When changing a device address the app will redirect you to the device list.
- We have added the NMP40 OS version.
- We have changed the app logo to match new AUDAC identity.
- The order of programming WP2xx series wall panels has changed.
- M2 global scene or priority popups are now full screen on tablets.
- We added device address in the linked devices dropdown box.
- Removed the empty space in the lock screen.
- Removed signal strength of the IMP40 'now playing widget'.

Bugfixes:

- The mixing button on zone slider for VEXO series are now fixed.
- Wavetune / Wavepresets requested settings if it didn't receive an announcement.
- We fixed the issue where volume button would get locked if you released it when you weren't on the button anymore.
- The AMP203 update issues are now fixed.
- The SMA / SMQ / PMQ input gain issue is fixed.
- M2 & R2 VU of a wrong device could be visible (VU was visible of a linked device that was incorrectly marked as direct).
- The AMP523 phantom setting was gone.
- Wavedynamics table view didn't handle the values correctly.
- The Wavedynamics disabled first order filter didn't export correctly.
- FMP event gain / enable didn't work correctly.
- We fixed the scaling of the image widget

Known issues:

- IOS can't communicate with devices if there is no internet present on the network connection.

We would like to thank everyone for all the feedback. Together we are building the future.

Supported platforms include: Linux, macOS, iOS, Android and Windows
